

ALUMINUM HYDRANT VALVE 52

- they are used for drawing water from the water supply network at temperatures up to 40°C
- thanks to the use of a large pitch trapezoidal thread in the spindle, it is possible to quickly open and close the valve
- it is used as one of the components of an internal hydrant
- capability for equipping with STORZ, DSP, BS, and other types of couplings
- in compliance with the EN 671

technical information:

| | |
|-----------------------|------------------------------|
| Type | hydrant aluminum 52 |
| Thread size | 2" |
| Weight with coulpling | 0,86kg |
| Material | aluminum castings, NBR seals |
| Working Pressure | 16 bar (1,6 Mpa) |
| Flow diameter | 50mm |
