

## BRASS HYDRANT VALVE 52

- they are used for drawing water from the water supply network at temperatures up to 40°C
- thanks to the use of a large pitch trapezoidal thread in the spindle, it is possible to quickly open and close the valve
- it is used as one of the components of an internal hydrant
- capability for equipping with STORZ, DSP, BS, and other types of couplings
- in compliance with the EN 671

### technical information:

Type	hydrant brass 52
Thread size	2"
Weight with coupling	1,44kg
Material	brass, aluminum castings, NBR seals
Working Pressure	25 bar (2,5 Mpa)
Flow diameter	50mm
Certificates	CNBOP, CSRG
